AI-VISION

ZERO WASTE

AI-Vision reads, understands, and adjusts in real time, correcting deviations automatically, eliminating trial-and-error and material waste. Format changes are handled seamlessly, minimizing **test scrap** when switching from one part to another.

PRECISION-FIRST ROLLING

Thanks to **high-definition laser technology** and readings always in the ideal position, AI-Vision projects thousands of measurement points across the entire surface of the plate. The laser reads the radius across the entire plate, ensuring **maximum precision** even in non-optimal environments. You get the right radius from the very first sheet: **no rework**, **no test runs**, and **no scrap**.

BUILT-IN SYNERGY WITH IROLL EXTREME

AI-Vision connects seamlessly with iRoll eXtreme, retroactively adjusting the CNC program without operator input. Behind this lies a vast database of successfully rolled parts, built on **60 years of experience**, that fuels its algorithms for **unmatched precision**.

AI-VISION

FILL
THE SKILL GAP

STOP
MATERIAL WASTE

SAVE
YOUR TIME

THREE TECHNOLOGIES. ONE VISION. INFINITE POTENTIAL.

MCE
Fully-electric power for ultra-precise rolling.

IROLL EXTREME
The CNC that programs, corrects, and visualizes in 3D.

AI-VISION
Intelligent vision that measures, adjusts, and optimizes in real time.
